

POLYZYME *Tablets*

Digestive enzymes

Composition:

Each especially, double coated tablet contains:

- Taka diastase (sanzyme 200) 60 mg.
- Pepsin 60 mg.
- Pancreatin 120 mg.

Properties:

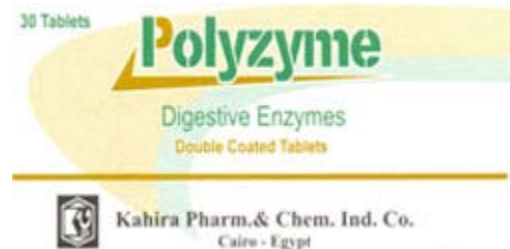

The combined action of taka-diastase, pepsin, and pancreatin provides polyzyme with a multi-enzymatic activity that normalizes poor digestion and improves dyspeptic conditions associated with deficient digestive enzyme secretion.

Taka-diastase is a potent amylolytic enzyme that converts starch into sugars facilitating carbohydrate digestion. While pepsin with its proteolytic activity breaks down proteins into the more easily digestible peptones and proteoses.

The digestion of carbohydrates and proteins is further enhanced by the amylase and trypsin components of pancreatin which also digests fats into fatty acids by its lipase component.

Indication:

To relieve symptoms of poor digestion such as flatulence, abdominal spasms, bowel disturbances, etc. which arise in such

conditions as:

- **Chronic gastritis, chronic pancreatitis, chronic biliary disorders.**
- **Nervous indigestion.**
- **Dietary indiscretion.**
- **In older patients where secretion of digestive enzymes becomes decreased.**
- **Post-cholecystectomy syndrome, post-gasterctomy ,post-surgical interference of the intestine, and post-enteritis.**

Dosage:

1 - 2 tablets during.

packing:

Containers of 30 tablets.
