

TOBRAL *sterile eye drops*

Tobramycin

Composition:

Each 5ml contains:

- Tobramycin(USP) 15 mg.

Properties:

TOBRAL is water soluble - broad spectrum bactericidal antibiotic which inhibits protein synthesis by competing with mRNA and has better antibacterial efficiency than other aminoglycoside antibiotic.

TOBRAL is active against both G-ve and G+v bacteria including *Pseudomonas aeruginosa*, *Homophiles influenza*, *Aegyptius*, *Neisseria sp.*, *Klebsiella Pneumonia*, *E. Coli*, *Proteus sp.*, *Enterobacter Aeorgenes*, *Moraxella Lacunata*, *Acinetobacter Calcouceticus*, *Staphylococci sp.*, including *S. Aureus*, *Streptococci sp.*, including *Strep. Pneumonia* and betahaemolytic *Streptococci*.

Indications:

TOBRAL is indicated to patients suffering from:

Superficial ocular infections (e.g. conjunctivitis. Keratitis, Kertoconjunctivits, corneal ulcer , blepharitis, blepharoconjunctivitis and acute meibomianitis).

Dosage & Administration:

The recommended for treatment of :

- Mild to moderate infections: one drop every four hours.
- Sever infections: one drop every one hour.

" Treatment should be continued until improvement occurs, followed by reducing the frequency of administration "

Packing:

A self dropper plastic bottle x 5 ml.
